

THE ENERGY TRANSITION IN COLOMBIA

Many economies are struggling with how to transition away from obvious indigenous resources in fossil fuels to a more renewable future.

This talk from May 2022 addresses some of these challenges for the thermal power industry in Colombia.

Various issues are addressed such as enlargement of the existing thermal power sector using fossil fuels.

Options available for transition to cleaner, more efficient and more economic solutions.

How new options provide diversification into new product streams.

How products fit a renewables future.

And a significant new development in thermal energy storage which complements this transition.
